National Tourist Price Index (NTPI) February 2024

The National Tourist Price Index is an economic indicator that monitors price fluctuations in representative tourist services in Mexico. Helps travelers, businesses and policymakers understand price trends in the tourism industry and impact on the national economy

136.04

134.35

selections and the selection of the sele

The NTPI registered a reduction, going from 134.35 in January 2024 to 136.04 in February 2024

The NTPI consists of six key components selected for their economic importance and representativeness in tourism consumption, which recorded the following annual inflation:

Air transportation +32.33%

Highway tolls +7.74%

Package tour services +7.64%

Restaurants, bars and the like +7.45%

Hotels +6.19%

Foreign bus +6.14%

International Traveller Account Index **January 2024**

The International Traveller Account Indices cover both the income and the flow of people entering the country, with the objective of measuring the monthly and annual variations accumulated to make a detailed monitoring of international tourism activity.

increased from 153.88 in January 2023 to 161.13

The cumulative ICVI for Inpatient Tourist Income increased from 159.37 in January 2023 to 166.87

Cumulative Revenue for Tourist Internment by Air went from 166.63 in January 2023 to 175.88

People

Economic Context (Ministry of Finance)

Domestic

In 2023, the Mexican economy tied three years of growth above its historical average by registering a growth rate of 3.2% annually. Even, since the third quarter of 2022, the historical peak of GDP was consecutively exceeded in each quarter, a situation that had not been observed in the last eight years. However, in the fourth quarter of 2023 there was a slowdown compared to the previous quarter, such that its growth rate was the lowest of the year.

The economy's performance was due to high levels of investment, in an environment of macroeconomic, political and social stability, which continues to generate high business confidence. Private investment alone grew 19.5% in 2023, which was the highest rate since 1996 when registration began. This momentum was also generated by changes in global trade trends and the phenomenon of business relocation. For its part, public investment linked two years with growth, derived from the effect of public works for oil refining and increased connectivity in the south-southeast region of the country.

Increases in real wages, improved working conditions and job creation led to increases in consumer confidence and demand for consumer credit. These elements, in turn, supported the increase in private consumption of 4.3% annually, almost double its historical average from 2011 to 2019 (prior to the COVID-19 pandemic).

International

In 2023, global economic activity showed better performance than expected at the beginning of the year. The US highlighted. with growth higher than anticipated due to the strength of private consumption and employment. In the euro area, the lagging effect of high energy prices reduced economic dynamism, while in China, while fiscal support helped to boost growth, this was offset by the weakness of its housing sector.

Inflation continued on a downward trajectory, although it remained above the targets of most central banks, in a context where supply shocks accumulated since the pandemic and the war in Ukraine have gradually dissipated. Pressure on supply chains decreased, with reductions in raw material prices remaining above the pre-pandemia level. Rising labour participation rates and moderating labour demand in advanced economies helped reduce wage pressures and their shift to core inflation, which also continued to decline during the year.

Financial conditions were restrictive in 2023. Central banks in advanced economies achieved unseen monetary policy rates in decades. Uncertainty about the end of the rise cycle and the start of recession cuts led to volatility in markets, especially in emerging economies. However, in the fourth quarter of the year, the optimism generated by the performance of the US economy and favorable inflation data reduced the probability that market participants assigned to the recession scenario in the US, and to reinforce the message of the end of the restrictive monetary cycle.
