## MUSEUMS AND ARCHAEOLOGICAL SITES

From January to October 2024, the National Institute of Anthropology and History reported **16.500 million visitors** to museums and archaeological sites, an increase of 367,288 visitors, or **2.3%**, compared to the same period in 2023. Of the total, **75.3%** were national visitors and **24.7%** were international.

### ECONOMY

The National Tourist Price Index is an economic indicator that monitors the fluctuation of prices in representative tourist services in Mexico. It helps travelers, businesses and policy makers understand price trends in the tourism industry and their impact on the national economy.

The INPT consists of six key components selected for their economic importance and representativeness in tourism consumption, which recorded the following annual inflation:

Source: SECTUR and Universidad Anáhuac within the framework of the Consultation Agreement signed between both institutions, with average price data published by INEGI.

http://www.datatur.sectur.gob.mx/SitePages/IndNacPreCon.aspx

Based on the Quarterly Indicators of Tourism Activity, the tourism GDP in the second quarter of 2024 decreased **0.4%** in real terms compared to what was recorded in the first quarter of 2024.

By components of tourism GDP, in the second quarter of 2024, Goods showed an increase of **1.4%**, while Services had a decrease of **0.8%** compared to what was recorded in the first quarter of 2024.

#### ECONOMIC CONTEXT (BANK OF MEXICO)

#### Domestic

In the third quarter of 2024, national economic activity showed a seasonally adjusted quarterly growth rate higher than those observed in the previous three quarters, during which the economy displayed marked weakness. Specifically, after respective quarterly variations of 0.07%, 0.06%, and 0.36% in the previous three quarters, in the July-September period, GDP increased by 1.08% on a seasonally adjusted quarterly basis. In annual comparison, GDP showed a 1.6% year-on-year increase with seasonally adjusted data (the same annual variation as observed with unadjusted figures).

From a sectoral perspective, economic performance in the third quarter of 2024 reflected increases in all three major sectors of economic activity. Primary activities made a relatively high contribution to the growth of the period (seasonally adjusted quarterly variation of 4.93% and a contribution of 0.16 percentage points to overall economic expansion). Meanwhile, industrial activity grew for the second consecutive quarter and continued to show improvement (seasonally adjusted quarterly growth of 0.88%), although it was just slightly above the level observed in the second half of 2023. In turn, tertiary activities maintained an upward trend, even accelerating their quarterly growth rate, expanding by 1.05% with seasonally adjusted data.

On the demand side, it is expected that in the third quarter, private consumption recovered from the contraction observed in the previous quarter. However, growth in this aggregate so far this year has been lower than that observed in the same period of 2023. Regarding investment, it is anticipated that in the third quarter it continued to expand after the stagnation observed between the last quarter of 2023 and early 2024. Finally, it is estimated that the added value of exports improved relative to the previous quarter.

#### International

In the third quarter of 2024, global economic activity expanded at a pace similar to that observed in the previous quarter. Both advanced economies and emerging markets recorded growth close to that seen in the second quarter, although with heterogeneous behavior across countries. In the quarter covered by this report, purchasing managers' indices showed a wide divergence between the manufacturing and services sectors. The indices for October suggest that activity in the services sector continued to expand, albeit at a more moderate pace.

In the United States, economic activity registered solid growth in the third quarter, although slightly lower than that observed in the previous quarter. The Gross Domestic Product (GDP) increased at a seasonally adjusted quarterly rate of 0.70%, after having risen by 0.74% in the second quarter.

In the Eurozone, economic activity registered modest growth in the third quarter of the year, although at a slightly higher pace than observed in the second quarter. Available indicators suggest that the services sector continued to support activity, while manufacturing remained weak. As for the labor market, it remained resilient.

In the third quarter of the year, the main emerging economies showed growth similar to that observed in the previous quarter.

Global growth projections developed by international organizations for 2024 and 2025 remained relatively stable compared to those available mid-year. Thus, they continue to indicate that the projected growth rate for 2025 would be similar to that observed in 2023 and to the expected rate for the end of 2024.
